Our intention:

- **Emphasis on WP T1 and overview of WP T2**
- **Practical approach with already working examples (off-grid and on-grid solar energy solutions) + designed solutions to implement during the CBSmallPorts project (wind energy and geothermal heating solutions)**

Lessons learned

- Native language allows precise understanding on very specific topics!
- Example is an example – no false shame to name exact companies and prices. These details are fast forward for others seeking for assistance.
- Two different sides of the project (T1 and T2) each deserves it's own seminar.
- While missing more harbour-people (who were busy with season preparations and would prefer to meet in person), we were happy to have so many listeners from administrations, local governments, educational field etc – to our delight, the audience was wide.
- Technical issues which have both financial and environmental impact are of great interest to our target groups.
